IMPSYS Change Notification

     We will shortly install (or perhaps will have already
installed) a new version of the IMP system, Version 2513. The
new version incorporates two principal changes:

  1. A Host will be prevented from sending any messages
      into the Network for between 40 seconds and a
      minute and a quarter after he comes alive (this
      has been changed from between 30 seconds and a
      minute).

  2. The IMP has been given the ability to test its Host
      interfaces under control of the NCC. This will help
      us isolate the trouble when the IMP Host communication
      path is faulty.

     BC/jm
