

# Package ‘OpenML’

May 7, 2026

**Title** Open Machine Learning and Open Data Platform

**Description** We provide an R interface to 'OpenML.org' which is an online machine learning platform where researchers can access open data, download and upload data sets, share their machine learning tasks and experiments and organize them online to work and collaborate with other researchers.

The R interface allows to query for data sets with specific properties, and allows the downloading and uploading of data sets, tasks, flows and runs.

See <<https://www.openml.org/guide/api>> for more information.

**License** BSD\_3\_clause + file LICENSE

**URL** <https://github.com/openml/openml-r>

**BugReports** <https://github.com/openml/openml-r/issues>

**Depends** R (>= 3.5.0)

**Suggests** testthat (>= 3.0.0), mlr (>= 2.15), ParamHelpers (>= 1.10),  
randomForest, rpart, RWeka, xml2, farff, knitr, rmarkdown,  
R.rsp, rex

**Imports** backports (>= 1.1.0), BBmisc (>= 1.11), checkmate (>= 1.8.2),  
data.table, digest, httr (>= 1.4.1), stringi, XML, jsonlite,  
memoise (>= 1.0.0), stats, curl (>= 4.1)

**ByteCompile** yes

**Version** 1.12

**RoxygenNote** 7.2.1

**VignetteBuilder** R.rsp

**Encoding** UTF-8

**Config/testthat/edition** 3

**NeedsCompilation** no

**Repository** CRAN

**Date/Publication** 2022-10-19 20:27:50 UTC

## Index 62

---

chunkOMLlist	<i>Do chunked listings</i>
--------------	----------------------------

---

### Description

Allows you to do multiple chunked requests with the listOML\* functions. The request will be repeated until total.limit is reached or until there are no more results available on the server.

### Usage

```
chunkOMLlist(listfun, ..., total.limit = 1e+05, chunk.limit = 1000)
```

### Arguments

listfun	[character(1)] the listing function for which you want to do chunked requests.
...	[ANY] arguments are passed to the function specified in listfun.
total.limit	[integer] the total limit of results that should be listed. Set this to a high number to get all available results from the server.
chunk.limit	[integer] the limit for a single request. If you reduce this number, the number of server requests will increase.

### See Also

Other listing functions: [listOMLDataSetQualities\(\)](#), [listOMLDataSets\(\)](#), [listOMLEstimationProcedures\(\)](#), [listOMLEvaluationMeasures\(\)](#), [listOMLFlows\(\)](#), [listOMLRuns\(\)](#), [listOMLSetup\(\)](#), [listOMLStudies\(\)](#), [listOMLTaskTypes\(\)](#), [listOMLTasks\(\)](#)

---

clearOMLCache	<i>Clear cache directories</i>
---------------	--------------------------------

---

### Description

Delete all cached objects and recreate cache directories.

### Usage

```
clearOMLCache()
```

### Examples

```
# \dontrun{  
#   clearOMLCache()  
# }
```

---

configuration	<i>OpenML configuration.</i>
---------------	------------------------------

---

### Description

After loading the package, it tries to find a configuration in your home directory. The R command `path.expand("~/openml/config")` gives you the full path to the configuration file on your operating system.

For further information please read the [vignette](#).

### Note

By default the cache directory is located in a temporary directory and the cache will be deleted in between R sessions. We thus recommend to set the cache directory by hand.

### See Also

Other config: [getOMLConfig\(\)](#), [loadOMLConfig\(\)](#), [saveOMLConfig\(\)](#), [setOMLConfig\(\)](#)

---

 convertMlrLearnerToOMLFlow

*Converts an OMLFlow to an mlr learner.*

---

### Description

Creates an [OMLFlow](#) for an [mlr Learner](#)] Required if you want to upload an mlr learner to the OpenML server.

### Usage

```
convertMlrLearnerToOMLFlow(
  lrn,
  name = paste0("mlr.", lrn$id),
  description = NULL,
  ...
)
```

### Arguments

lrn	[ <a href="#">Learner</a> ] The mlr learner.
name	[character(1)] The name of the flow object. Default is the learner ID with the prefix “mlr” prepended.
description	[character(1)] An optional description of the learner. Default is a short specification of the learner and the associated package.
...	[any] Further optional parameters that are passed to <a href="#">makeOMLFlow</a> .

### Value

[[OMLFlow](#)].

---

convertMlrTaskToOMLDataSet

*Converts a mlr task to an OpenML data set.*

---

### Description

Converts a [Task](#) to an [OMLDataSet](#).

**Usage**

```
convertMlrTaskToOMLDataSet(task, description = NULL)
```

**Arguments**

task	[Task] A mlr task.
description	[character(1) OMLDataSetDescription] Either an <a href="#">OMLDataSetDescription</a> or a character(1) that describes the data. For the latter, all other relevant information is autogenerated from the <a href="#">Task</a> .

**Value**

[OMLDataSet].

**See Also**

Other data set-related functions: [OMLDataSetDescription](#), [OMLDataSet](#), [convertOMLDataSetToMlr\(\)](#), [deleteOMLObject\(\)](#), [getOMLDataSet\(\)](#), [listOMLDataSets\(\)](#), [tagOMLObject\(\)](#), [uploadOMLDataSet\(\)](#)

---

```
convertOMLDataSetToMlr
```

*Convert an OpenML data set to mlr task.*

---

**Description**

Converts an [OMLDataSet](#) to a [Task](#).

**Usage**

```
convertOMLDataSetToMlr(
  obj,
  mlr.task.id = "<oml.data.name>",
  task.type = NULL,
  target = obj$desc$default.target.attribute,
  ignore.flagged.attributes = TRUE,
  drop.levels = TRUE,
  fix.colnames = TRUE,
  verbosity = NULL
)
```

**Arguments**

obj	[OMLDataSet] The object that should be converted.
mlr.task.id	[character(1)] Id string for <a href="#">Task</a> object. The strings <oml.data.name>, <oml.data.id> and <oml.data.version> will be replaced by their respective values contained in the <a href="#">OMLDataSet</a> object. Default is <oml.data.name>.
task.type	[character(1)] As we only pass the data set, we need to define the task type manually. Possible are: “Supervised Classification”, “Supervised Regression”, “Survival Analysis”. Default is NULL which means to guess it from the target column in the data set. If that is a factor or a logical, we choose classification. If it is numeric we choose regression. In all other cases an error is thrown.
target	[character] The target for the classification/regression task. Default is the <code>default.target.attribute</code> of the <a href="#">OMLDataSetDescription</a> .
ignore.flagged.attributes	[logical(1)] Should those features that are listed in the data set description slot “ignore.attribute” be removed? Default is TRUE.
drop.levels	[logical(1)] Should empty factor levels be dropped in the data? Default is TRUE.
fix.colnames	[logical(1)] Should colnames of the data be fixed using <a href="#">make.names</a> ? Default is TRUE.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

**Value**

[[Task](#)].

**See Also**

Other data set-related functions: [OMLDataSetDescription](#), [OMLDataSet](#), [convertMlrTaskToOMLDataSet\(\)](#), [deleteOMLObject\(\)](#), [getOMLDataSet\(\)](#), [listOMLDataSets\(\)](#), [tagOMLObject\(\)](#), [uploadOMLDataSet\(\)](#)

**Examples**

```
# \dontrun{
# library("mlr")
# autosOML = getOMLDataSet(data.id = 9)
# autosMlr = convertOMLDataSetToMlr(autosOML)
# }
```

---

convertOMLFlowToMlr *Converts a flow to a mlr learner.*

---

### Description

Converts an [OMLFlow](#) that was originally created with the OpenML R-package to a [Learner](#).

### Usage

```
convertOMLFlowToMlr(flow)
```

### Arguments

flow            [\[OMLFlow\]](#)  
The flow object.

### Value

[\[Learner\]](#).

### See Also

Other flow-related functions: [deleteOMLObject\(\)](#), [getOMLFlow\(\)](#), [listOMLFlows\(\)](#), [makeOMLFlowParameter\(\)](#), [makeOMLFlow\(\)](#), [tagOMLObject\(\)](#)

---

convertOMLMlrRunToBMR *Convert OMLMlrRuns to a BenchmarkResult.*

---

### Description

Converts one or more [OMLMlrRuns](#) to a [BenchmarkResult](#).

### Usage

```
convertOMLMlrRunToBMR(...)
```

### Arguments

...            [\[OMLMlrRun\]](#)  
One or more [OMLMlrRuns](#)

### Value

[\[BenchmarkResult\]](#).

**See Also**

Other run-related functions: [convertOMLRunToBMR\(\)](#), [deleteOMLObject\(\)](#), [getOMLRun\(\)](#), [listOMLRuns\(\)](#), [makeOMLRunParameter\(\)](#), [makeOMLRun\(\)](#), [tagOMLObject\(\)](#), [uploadOMLRun\(\)](#)

---

convertOMLRunToBMR	<i>Convert an OpenML run set to a benchmark result for mlr.</i>
--------------------	---

---

**Description**

Converts an [OMLRun](#) to a [BenchmarkResult](#).

**Usage**

```
convertOMLRunToBMR(
  run,
  measures = run$task.evaluation.measure,
  recompute = FALSE
)
```

**Arguments**

run	<a href="#">[OMLRun]</a> The run that should be converted.
measures	<a href="#">[character]</a> Character describing the measures (see <a href="#">listOMLEvaluationMeasures</a> ) that will be converted into mlr <a href="#">measures</a> and are then used in the <a href="#">BenchmarkResult</a> . Currently, not all measures from OpenML can be converted into mlr measures.
recompute	<a href="#">[logical(1)]</a> Should the measures be recomputed with mlr using the predictions? Currently recomputing is not supported.

**Value**

[\[BenchmarkResult\]](#).

**See Also**

Other run-related functions: [convertOMLMlrRunToBMR\(\)](#), [deleteOMLObject\(\)](#), [getOMLRun\(\)](#), [listOMLRuns\(\)](#), [makeOMLRunParameter\(\)](#), [makeOMLRun\(\)](#), [tagOMLObject\(\)](#), [uploadOMLRun\(\)](#)

---

convertOMLTaskToMlr    *Convert an OpenML task to mlr.*

---

## Description

Converts an [OMLTask](#) to a list of [Task](#), [ResampleInstance](#) and [Measure](#).

## Usage

```
convertOMLTaskToMlr(
  obj,
  measures = NULL,
  mlr.task.id = "<oml.data.name>",
  ignore.flagged.attributes = TRUE,
  drop.levels = TRUE,
  verbosity = NULL
)
```

## Arguments

obj	[ <a href="#">OMLTask</a> ] The OML task object that should be converted.
measures	[ <a href="#">Measure</a> ] Additional measures that should be computed.
mlr.task.id	[character(1)] Id string for <a href="#">Task</a> object. The strings <oml.data.name>, <oml.data.id>, <oml.data.version> and <oml.task.id> will be replaced by their respective values contained in the <a href="#">OMLTask</a> object. Default is <oml.data.name>.
ignore.flagged.attributes	[logical(1)] Should those features that are listed in the data set description slot "ignore.attribute" be removed? Default is TRUE.
drop.levels	[logical(1)] Should empty factor levels be dropped in the data? Default is TRUE.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

## Value

[list] A list with the following objects:

**mlr.task** [[Task](#)]

**mlr.rin** [[ResampleInstance](#)]

**mlr.measures** [list of [Measures](#) to optimize for.]

### See Also

Other task-related functions: [deleteOMLObject\(\)](#), [getOMLTask\(\)](#), [listOMLTaskTypes\(\)](#), [listOMLTasks\(\)](#), [makeOMLTask\(\)](#), [tagOMLObject\(\)](#)

### Examples

```
# \dontrun{
# library("mlr")
# vinnieOML = getOMLTask(task.id = 4845)
# vinnieMlr = convertOMLTaskToMlr(vinnieOML)
# }
```

---

deleteOMLObject	<i>Delete an OpenML object.</i>
-----------------	---------------------------------

---

### Description

This will delete one of your uploaded datasets, tasks, flows or runs. Note that you can only delete the objects you uploaded.

### Usage

```
deleteOMLObject(
  id,
  object = c("data", "task", "flow", "run", "study"),
  verbosity = NULL
)
```

### Arguments

<b>id</b>	[integer(1)] The ID of the respective object.
<b>object</b>	[character(1)] A character that specifies the object you want to delete from the server. Can be either "data", "task", "flow" or "run".
<b>verbosity</b>	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

**See Also**

Other data set-related functions: [OMLDataSetDescription](#), [OMLDataSet](#), [convertMlrTaskToOMLDataSet\(\)](#), [convertOMLDataSetToMlr\(\)](#), [getOMLDataSet\(\)](#), [listOMLDataSets\(\)](#), [tagOMLObject\(\)](#), [uploadOMLDataSet\(\)](#)

Other task-related functions: [convertOMLTaskToMlr\(\)](#), [getOMLTask\(\)](#), [listOMLTaskTypes\(\)](#), [listOMLTasks\(\)](#), [makeOMLTask\(\)](#), [tagOMLObject\(\)](#)

Other flow-related functions: [convertOMLFlowToMlr\(\)](#), [getOMLFlow\(\)](#), [listOMLFlows\(\)](#), [makeOMLFlowParameter\(\)](#), [makeOMLFlow\(\)](#), [tagOMLObject\(\)](#)

Other run-related functions: [convertOMLMlrRunToBMR\(\)](#), [convertOMLRunToBMR\(\)](#), [getOMLRun\(\)](#), [listOMLRuns\(\)](#), [makeOMLRunParameter\(\)](#), [makeOMLRun\(\)](#), [tagOMLObject\(\)](#), [uploadOMLRun\(\)](#)

---

extractOMLStudyIds      *Extract IDs of a OMLStudy object*

---

**Description**

Extracts either all `data.ids`, `task.ids`, `flow.ids` or `run.ids` from an `OMLStudy` object.

**Usage**

```
extractOMLStudyIds(object, type, chunk.size = 400)
```

**Arguments**

<code>object</code>	[OMLStudy] The OMLStudy object.
<code>type</code>	[character(1)] A character that specifies which ids should be extracted from the study. Can be either "data.id", "task.id", "flow.id" or "run.id".
<code>chunk.size</code>	[integer(1)] If the number of ids to be returned exceeds "chunk.size", a list of ids is returned. Each list element contains not more than "chunk.size" elements. Default is 400.

**Value**

[numeric].

---

`getCachedOMLDataSetStatus`*Check status of cached datasets.*

---

**Description**

The caching mechanism is fine, but sometimes you might want to work on a dataset, which is already cached and has been deactivated in the meanwhile. This function can be used to determine the status of all cached datasets.

**Usage**

```
getCachedOMLDataSetStatus(show.warnings = TRUE, ...)
```

**Arguments**

`show.warnings` [logical(1)]  
Show warning if there are deactivated datasets in cache? Default is TRUE.

`...` Arguments passed to [listOMLDataSets](#)

**Value**

[data.frame]

**Examples**

```
# \dontrun{  
# getCachedOMLDataSetStatus()  
# }
```

---

`getOMLConfig`*Get OpenML configuration.*

---

**Description**

Returns a list of OpenML configuration settings.

**Usage**

```
getOMLConfig()
```

**Value**

list of current configuration variables with class "OMLConfig".

**See Also**

Other config: [configuration](#), [loadOMLConfig\(\)](#), [saveOMLConfig\(\)](#), [setOMLConfig\(\)](#)

**Examples**

```
getOMLConfig()
```

---

getOMLDataSet	<i>Get an OpenML data set.</i>
---------------	--------------------------------

---

**Description**

Given a data set ID, the corresponding [OMLDataSet](#) will be downloaded (if not in cache) and returned.

Note that data splits and other task-related information are not included in an [OMLDataSet](#). Tasks can be downloaded with [getOMLTask](#).

**Usage**

```
getOMLDataSet(  
  data.id = NULL,  
  data.name = NULL,  
  data.version = NULL,  
  cache.only = FALSE,  
  verbosity = NULL  
)
```

**Arguments**

data.id	[integer(1)] ID of the data set.
data.name	[character(1)] Data set name. This is an alternative to data.id. Default is NULL.
data.version	[integer(1)] Version number of the data set with name data.name. Default is NULL. Ignored if data.id is passed.
cache.only	[logical(1)] Only try to retrieve the object from cache. Will result in error if the object is not found. Default is FALSE.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

**Value**

[OMLDataSet].

**Note**

One of data.id or data.name must be passed.

**See Also**

Other downloading functions: [getOMLDataSetQualities\(\)](#), [getOMLFlow\(\)](#), [getOMLRun\(\)](#), [getOMLStudy\(\)](#), [getOMLTask\(\)](#)

Other data set-related functions: [OMLDataSetDescription](#), [OMLDataSet](#), [convertMlrTaskToOMLDataSet\(\)](#), [convertOMLDataSetToMlr\(\)](#), [deleteOMLObject\(\)](#), [listOMLDataSets\(\)](#), [tagOMLObject\(\)](#), [uploadOMLDataSet\(\)](#)

**Examples**

```
# \dontrun{
# dat = getOMLDataSet(data.id = 9)
#
# # this object contains the data ($data)
# # and meta information
# str(dat, 1)
# summary(dat$data)
# }
```

---

getOMLDataSetQualities

*List available OpenML qualities with values for given data set.*

---

**Description**

The returned data.frame contains data set quality “name”s and values “value”.

**Usage**

```
getOMLDataSetQualities(data.id, verbosity = NULL, name = NULL)
```

**Arguments**

data.id	[integer(1)] ID of the data set.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

name [character]  
Returns only the data qualities from “name” (see also [listOMLDataSetQualities](#)).  
Default is NULL and uses all available data qualities.

**Value**

[data.frame].

**See Also**

Other downloading functions: [getOMLDataSet\(\)](#), [getOMLFlow\(\)](#), [getOMLRun\(\)](#), [getOMLStudy\(\)](#), [getOMLTask\(\)](#)

**Examples**

```
# \dontrun{
# a = getOMLDataSetQualities(data.id = 9)
# a[a$name == "number.of.missing.values", ]
# getOMLDataSetQualities(data.id = 9, name = "number.of.missing.values")
# }
```

---

getOMLFlow

*Download an OpenML flow.*

---

**Description**

Given an flow id, the corresponding [OMLFlow](#) is downloaded if not already available in cache.

**Usage**

```
getOMLFlow(flow.id, cache.only = FALSE, verbosity = NULL)
```

**Arguments**

flow.id [integer(1)]  
ID of the implementation of an OpenML flow.

cache.only [logical(1)]  
Only try to retrieve the object from cache. Will result in error if the object is not found. Default is FALSE.

verbosity [integer(1)]  
Print verbose output on console? Possible values are:  
0: normal output,  
1: info output,  
2: debug output.  
Default is set via [setOMLConfig](#).

**Value**

[[OMLFlow](#)].

**See Also**

Other downloading functions: [getOMLDataSetQualities\(\)](#), [getOMLDataSet\(\)](#), [getOMLRun\(\)](#), [getOMLStudy\(\)](#), [getOMLTask\(\)](#)

Other flow-related functions: [convertOMLFlowToMlr\(\)](#), [deleteOMLObject\(\)](#), [listOMLFlows\(\)](#), [makeOMLFlowParameter\(\)](#), [makeOMLFlow\(\)](#), [tagOMLObject\(\)](#)

**Examples**

```
# \dontrun{
# r_ctree = getOMLFlow(flow.id = 2569)
# weka_bagging = getOMLFlow(flow.id = 2286)
# }
```

---

getOMLRun

*Get an OpenML run.*

---

**Description**

Given an run id, the corresponding [OMLRun](#) including all server and user computed metrics is downloaded if not already available in cache.

**Usage**

```
getOMLRun(run.id, cache.only = FALSE, only.xml = FALSE, verbosity = NULL)
```

**Arguments**

run.id	[integer(1)] The run ID.
cache.only	[logical(1)] Only try to retrieve the object from cache. Will result in error if the object is not found. Default is FALSE.
only.xml	[logical(1)] Should only the XML be downloaded?
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

**Value**

[[OMLRun](#)].

**See Also**

Other downloading functions: [getOMLDataSetQualities\(\)](#), [getOMLDataSet\(\)](#), [getOMLFlow\(\)](#), [getOMLStudy\(\)](#), [getOMLTask\(\)](#)

Other run-related functions: [convertOML1rRunToBMR\(\)](#), [convertOMLRunToBMR\(\)](#), [deleteOMLObject\(\)](#), [listOMLRuns\(\)](#), [makeOMLRunParameter\(\)](#), [makeOMLRun\(\)](#), [tagOMLObject\(\)](#), [uploadOMLRun\(\)](#)

**Examples**

```
# \dontrun{
# runs_ctree = listOMLRuns(flow.id = 2569)
# run1 = getOMLRun(run.id = runs_ctree$run.id[1])
# str(run1, 1)
# }
```

---

getOMLRunParList	<i>Extract OMLRunParList from run</i>
------------------	---------------------------------------

---

**Description**

Extracts the seed information as [OMLRunParList](#) from a [OMLRun](#).

**Usage**

```
getOMLRunParList(run)
```

**Arguments**

run	[OMLRun] A <a href="#">OMLRun</a>
-----	--------------------------------------

**Value**

[OMLRunParList].

---

getOMLSeedParList	<i>Extract OMLSeedParList from run</i>
-------------------	--

---

**Description**

Extracts the seed information as [OMLSeedParList](#) from a [OMLRun](#).

**Usage**

```
getOMLSeedParList(run)
```

**Arguments**

run [OMLRun]  
A [OMLRun](#)

**Value**

[OMLSeedParList].

---

getOMLStudy *Get OpenML Study information.*

---

**Description**

A OpenML study is a collection of OpenML objects with a specific tag defined by the user (i.e. "study\_X"). If you create a study through the website <https://www.openml.org/new/study>, you can also specify an alias which can be used to access the study.

**Usage**

```
getOMLStudy(study = NULL, verbosity = NULL)
```

**Arguments**

study [numeric(1)|character(1)]  
Either the id or the alias of a study.

verbosity [integer(1)]  
Print verbose output on console? Possible values are:  
0: normal output,  
1: info output,  
2: debug output.  
Default is set via [setOMLConfig](#).

**Value**

[OMLStudy].

**Note**

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

---

getOMLTask	<i>Get an OpenML task.</i>
------------	----------------------------

---

### Description

Given a task ID, the corresponding [OMLTask](#) will be downloaded (if not in cache) and returned.

### Usage

```
getOMLTask(task.id, cache.only = FALSE, verbosity = NULL)
```

### Arguments

task.id	[integer(1)] Task ID.
cache.only	[logical(1)] Only try to retrieve the object from cache. Will result in error if the object is not found. Default is FALSE.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

### Value

[[OMLTask](#)].

### See Also

Other downloading functions: [getOMLDataSetQualities\(\)](#), [getOMLDataSet\(\)](#), [getOMLFlow\(\)](#), [getOMLRun\(\)](#), [getOMLStudy\(\)](#)

### Examples

```
## Download task and access relevant information to start running experiments
# \dontrun{
#   task = getOMLTask(1)
#   task
#   task$task.type
#   task$input$data.set
#   head(task$input$data.set$data)
# }
```

---

`listOMLDataSetQualities`*List available OpenML qualities names.*

---

### Description

The returned data.frame contains quality name “name”.

### Usage

```
listOMLDataSetQualities(verbosity = NULL)
```

### Arguments

<code>verbosity</code>	<code>[integer(1)]</code> Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .
------------------------	---

### Value

[data.frame].

### Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

### Examples

```
# \dontrun{  
# listOMLDataSetQualities()  
# }
```

---

listOMLDataSets	<i>List the first 5000 OpenML data sets.</i>
-----------------	--

---

### Description

The returned data.frame contains the data set id “data.id”, the “status” (“active”, “deactivated”, “in\_preparation”) and describing data qualities.

Note that by default only active data sets (due to “status = “active””) will be returned. Furthermore, the argument “limit = 5000” will limit the number of results to 5000.

### Usage

```
listOMLDataSets(
  number.of.instances = NULL,
  number.of.features = NULL,
  number.of.classes = NULL,
  number.of.missing.values = NULL,
  tag = NULL,
  data.name = NULL,
  limit = 5000,
  offset = NULL,
  status = "active",
  verbosity = NULL
)
```

### Arguments

number.of.instances	[numeric(1)   numeric(2)] If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.
number.of.features	[numeric(1)   numeric(2)] If not NULL, it subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given range.
number.of.classes	[numeric(1)   numeric(2)] If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.
number.of.missing.values	[numeric(1)   numeric(2)] If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.
tag	[character] If not NULL only entries with the corresponding tags are listed.

data.name	[character(1)] Name of the data set.
limit	[numeric(1)] Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.
offset	[numeric(1)] Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.
status	[character] Subsets the results according to the status. Possible values are {"active", "deactivated", "in_preparation", "all"}. Default is "active".
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

**Value**

[data.frame].

**Note**

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

**Examples**

```
# \dontrun{  
# datasets = listOMLDataSets()  
# tail(datasets)  
# }
```

---

`listOMLEstimationProcedures`*List available estimation procedures.*

---

### Description

The returned `data.frame` contains the `est.id` and the corresponding name of the estimation procedure.

### Usage

```
listOMLEstimationProcedures(verbosity = NULL)
```

### Arguments

<code>verbosity</code>	<code>[integer(1)]</code> Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .
------------------------	---

### Value

[`data.frame`].

### Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

### Examples

```
# \dontrun{  
#   listOMLEstimationProcedures()  
# }
```

---

`listOMLEvaluationMeasures`*List available OpenML evaluation measures.*

---

## Description

The names of all evaluation measures which are used in at least one run are returned in a `data.frame`.

## Usage

```
listOMLEvaluationMeasures(verbosity = NULL)
```

## Arguments

<code>verbosity</code>	<code>[integer(1)]</code> Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .
------------------------	---

## Value

`[data.frame]`.

## Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

## Examples

```
# \dontrun{  
# listOMLEvaluationMeasures()  
# }
```

---

listOMLFlows	<i>List all registered OpenML flows.</i>
--------------	--

---

### Description

The returned data.frame contains the flow id “fid”, the flow name (“full.name” and “name”), version information (“version” and “external.version”) and the uploader (“uploader”) of all registered OpenML flows.

### Usage

```
listOMLFlows(tag = NULL, limit = NULL, offset = NULL, verbosity = NULL)
```

### Arguments

tag	[character] If not NULL only entries with the corresponding tags are listed.
limit	[numeric(1)] Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.
offset	[numeric(1)] Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

### Value

[data.frame].

### Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

**Examples**

```
# \dontrun{
# flows = listOMLFlows()
# tail(flows)
# }
```

---

listOMLRunEvaluations *List run results of a task.*

---

**Description**

Retrieves all run results for task(s) (`task.id`), flow(s) (`flow.id`) run(s) (`run.id`) or uploaders(s) (`uploader.id`) and returns a data.frame. Each row contains, among others, the run id “rid”. Alternatively the function can be passed a single tag to list only runs with the corresponding tag associated.

**Usage**

```
listOMLRunEvaluations(
  task.id = NULL,
  flow.id = NULL,
  run.id = NULL,
  uploader.id = NULL,
  tag = NULL,
  limit = NULL,
  offset = NULL,
  verbosity = NULL,
  evaluation.measure = NULL,
  show.array.measures = FALSE,
  extend.flow.name = TRUE
)
```

**Arguments**

<code>task.id</code>	[integer] a single ID or a vector of IDs of the task(s).
<code>flow.id</code>	[integer] a single ID or a vector of IDs of the flow(s).

run.id	[integer] a single ID or a vector of IDs of the run(s).
uploader.id	[integer] a single ID or a vector of IDs of uploader profile(s).
tag	[character] If not NULL only entries with the corresponding tags are listed.
limit	[numeric(1)] Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.
offset	[numeric(1)] Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .
evaluation.measure	[character(1)] Use this to speedup your request. It restricts the results to only one evaluation measure (see <a href="#">listOMLEvaluationMeasures</a> for possible values). Default is NULL, which means that no restriction is going to happen and all possible evaluation measures will be returned.
show.array.measures	[logical(1)] Should measures that return an array instead of a single skalar value be shown (e.g. confusion matrix, predictive accuracy within each class)? Default is FALSE.
extend.flow.name	[logical(1)] Adds a column flow.version that refers to the version number of the flow and a column flow.source containing the prefix of the flow that specifies the source of the flow (i.e. weka, R) and a column learner.name that refers to the learner. Default is TRUE.

**Value**

[data.frame].

**Note**

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

**Examples**

```
# \dontrun{
# # get run results of task 6 (as many rows as runs for this task)
# rev_tid6 = listOMLRunEvaluations(task.id = 6L)
# str(rev_tid6)
#
# # get run results of run 8 (one row)
# rev_rid8 = listOMLRunEvaluations(run.id = 8)
# str(rev_rid8)
# }
```

---

listOMLRuns	<i>List the first 5000 OpenML runs.</i>
-------------	---

---

**Description**

This function returns information on all OpenML runs that match certain `task.id(s)`, `run.id(s)`, `flow.id` and/or `uploader.id(s)`. Alternatively the function can be passed a single tag to list only runs with the corresponding tag associated. Note that by default only the first 5000 runs will be returned (due to the argument “limit = 5000”).

**Usage**

```
listOMLRuns(
  task.id = NULL,
  flow.id = NULL,
  run.id = NULL,
  uploader.id = NULL,
  tag = NULL,
  limit = 5000,
  offset = NULL,
  verbosity = NULL
)
```

**Arguments**

<code>task.id</code>	[integer] a single ID or a vector of IDs of the task(s).
<code>flow.id</code>	[integer] a single ID or a vector of IDs of the flow(s).
<code>run.id</code>	[integer] a single ID or a vector of IDs of the run(s).
<code>uploader.id</code>	[integer] a single ID or a vector of IDs of uploader profile(s).
<code>tag</code>	[character] If not NULL only entries with the corresponding tags are listed.

limit	[numeric(1)] Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.
offset	[numeric(1)] Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

**Value**

[data.frame].

**Note**

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

**Examples**

```
# \dontrun{
#   runs_ctree = listOMLRuns(flow.id = 2569)
#   head(runs_ctree)
# }
```

---

listOMLSetup

*List hyperparameter settings*

---

**Description**

Each run has a setup.id, i.e. an ID for the hyperparameter settings of the flow that produced the run. This function allows the listing of hyperparameter settings.

**Usage**

```
listOMLSetup(  
  setup.id = NULL,  
  flow.id = NULL,  
  limit = 1000,  
  offset = NULL,  
  verbosity = NULL  
)
```

**Arguments**

setup.id	[integer(1)] ID of the setup (which is basically an ID for the parameter configuration).
flow.id	[integer(1)] ID of the implementation of an OpenML flow.
limit	[numeric(1)] Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.
offset	[numeric(1)] Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

**Value**

[data.frame].

**Note**

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

**Examples**

```
# \dontrun{
#   listOMLSetup(limit = 1)
# }
```

---

listOMLStudies	<i>list OpenML Studies.</i>
----------------	-----------------------------

---

**Description**

Retrives a list of available studies.

**Usage**

```
listOMLStudies(
  main.entity.type = NULL,
  status = "all",
  uploader.id = NULL,
  limit = NULL,
  offset = NULL,
  verbosity = NULL
)
```

**Arguments**

main.entity.type	[character] Whether a collection of runs (study) or collection of tasks (benchmark suite) should be returned. Subsets the results according to the entity type. Possible values are {NULL, "task", "run"}. Default is NULL which means that no sub-setting is done.
status	[character] Subsets the results according to the status. Possible values are {"active", "deactivated", "in_preparation", "all"}. Default is "active".
uploader.id	[integer] a single ID or a vector of IDs of uploader profile(s).
limit	[numeric(1)] Optional. The maximum number of entries to return. Without specifying offset, it returns the first 'limit' entries. Setting limit = NULL returns all available entries.
offset	[numeric(1)] Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.

verbosity [integer(1)]  
 Print verbose output on console? Possible values are:  
 0: normal output,  
 1: info output,  
 2: debug output.  
 Default is set via [setOMLConfig](#).

**Value**

[data.frame].

**Note**

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

---

listOMLTasks	<i>List the first 5000 OpenML tasks.</i>
--------------	--

---

**Description**

The returned data.frame contains the task\_id, the data set id data.id, the status and some describing data qualities. Note that by default only the first 5000 data sets will be returned (due to the argument “limit = 5000”).

**Usage**

```
listOMLTasks(
  task.type = NULL,
  estimation.procedure = NULL,
  evaluation.measures = NULL,
  number.of.instances = NULL,
  number.of.features = NULL,
  number.of.classes = NULL,
  number.of.missing.values = NULL,
  tag = NULL,
  data.name = NULL,
  data.tag = NULL,
  limit = 5000,
  offset = NULL,
```

```

    status = "active",
    verbosity = NULL
)

```

### Arguments

**task.type** [character(1)]  
 If not NULL, only tasks belonging to the given task type are listed. Use `listOMLTaskTypes()$name` to see possible values for `task.type`. The default is NULL, which means that tasks with all available task types are listed.

**estimation.procedure** [character]  
 If not NULL, only tasks belonging the given estimation procedures are listed. Use `listOMLEstimationProcedures()$name` to see possible values for `estimation.procedure`. The default is NULL, which means that tasks with all available estimation procedures are listed.

**evaluation.measures** [character]  
 If not NULL, only tasks belonging the given evaluation measures are listed. Use `listOMLEvaluationMeasures()$name` to see possible values for `evaluation.measures`. The default is NULL, which means that tasks with all available evaluation measures are listed.

**number.of.instances** [numeric(1) | numeric(2)]  
 If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

**number.of.features** [numeric(1) | numeric(2)]  
 If not NULL, it subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given range.

**number.of.classes** [numeric(1) | numeric(2)]  
 If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

**number.of.missing.values** [numeric(1) | numeric(2)]  
 If not NULL, subsets the entries with respect to the given values or, if a vector of length 2 is passed, the given ranges.

**tag** [character]  
 If not NULL only entries with the corresponding tags are listed.

**data.name** [character(1)]  
 Name of the data set.

**data.tag** [character(1)]  
 Refers to the tag of the dataset the task is based on. If not NULL only tasks with the corresponding `data.tag` are listed.

**limit** [numeric(1)]  
 Optional. The maximum number of entries to return. Without specifying `offset`,

	it returns the first 'limit' entries. Setting limit = NULL returns all available entries.
offset	[numeric(1)] Optional. The offset to start from. Should be indices starting from 0, which do not refer to IDs. Is ignored when no limit is given.
status	[character] Subsets the results according to the status. Possible values are {"active", "deactivated", "in_preparation", "all"}. Default is "active".
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

### Value

[data.frame].

### Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

### Examples

```
# \dontrun{
# tasks = listOMLTasks()
# head(tasks)
# }
```

---

listOMLTaskTypes      *List available OpenML task types.*

---

### Description

The returned data.frame contains the type id and the character name of the OpenML task type.

### Usage

```
listOMLTaskTypes(verbosity = NULL)
```

### Arguments

verbosity      [integer(1)]  
Print verbose output on console? Possible values are:  
0: normal output,  
1: info output,  
2: debug output.  
Default is set via [setOMLConfig](#).

### Value

[data.frame].

### Note

This function is memoised. I.e., if you call this function twice in a running R session, the first call will query the server and store the results in memory while the second and all subsequent calls will return the cached results from the first call. You can reset the cache by calling [forget](#) on the function manually.

### Examples

```
# \dontrun{  
#   listOMLTaskTypes()  
# }
```

---

loadOMLConfig	<i>Load OpenML configuration.</i>
---------------	-----------------------------------

---

### Description

Loads the OpenML config file from the disk and overwrites the current OpenML config. If there is no API key in the configuration file, the key is retrieved from the environment variable “OPENMLAPIKEY” (if defined).

### Usage

```
loadOMLConfig(path = "~/openml/config", assign = TRUE)
```

### Arguments

path	[character(1)] Full path location of the config file to be loaded.
assign	[logical(1)] Use the loaded configuration as the current configuration? If set to FALSE, the configuration is just returned by the function. Default is TRUE.

### Value

list of current configuration variables with class “OMLConfig”.

### See Also

Other config: [configuration](#), [getOMLConfig\(\)](#), [saveOMLConfig\(\)](#), [setOMLConfig\(\)](#)

### Examples

```
## if assign = FALSE nothing is changed
## usually one would want assign = TRUE
# \dontrun{
#   loadOMLConfig(assign = FALSE)
# }
```

---

makeOMLFlow	<i>Construct OMLFlow.</i>
-------------	---------------------------

---

### Description

More details about the elements of a OMLFlow can be found in the [documentation](#).

**Usage**

```

makeOMLFlow(
  flow.id = NA_integer_,
  uploader = NA_integer_,
  name,
  version = NA_character_,
  external.version = NA_character_,
  description,
  creator = NA_character_,
  contributor = NA_character_,
  upload.date = NA_character_,
  licence = NA_character_,
  language = "English",
  full.description = NA_character_,
  installation.notes = NA_character_,
  dependencies = NA_character_,
  bibliographical.reference = NULL,
  implements = NA_character_,
  parameters = NULL,
  components = NULL,
  qualities = NULL,
  tags = NA_character_,
  source.url = NA_character_,
  binary.url = NA_character_,
  source.format = NA_character_,
  binary.format = NA_character_,
  source.md5 = NA_character_,
  binary.md5 = NA_character_,
  source.path = NA_character_,
  binary.path = NA_character_,
  object = NULL
)

```

**Arguments**

flow.id	[integer(1)] ID of the flow. Generated by the server, based on name and version of the flow. Ignored when uploaded manually.
uploader	[integer(1)] The user that uploaded the flow. Added by the server. Ignored when uploaded manually.
name	[character(1)] The name of the flow. Name-version combinations should be unique. Allowed characters: () [] a-z A-Z 0-9 . _ - +
version	[character(1)] The version of the flow. Default is 1.0. Ignored at upload time.

external.version	[character(1)] An external version, defined by the user. In combination with the name, it must be unique.
description	[character(1)] A user description of the flow.
creator	[character] Optional. The persons/institutions that created the flow.
contributor	[character] Optional. (Minor) contributors to the workflow
upload.date	[character(1)] The date on which the flow was uploaded. Format YYYY-mm-ddThh:MM:SS. Added by the server. Ignored when uploaded manually.
licence	[character(1)] Optional. Default is none, meaning Public Domain or "don't know/care".
language	[character(1)] Optional. Starts with one upper case letter, rest is lower case. Default is English.
full.description	[character(1)] Optional. Full description of the workflow, e.g, man pages filled in by tool. This is a much more elaborate description than given in the 'description field'. It may include information about all components of the workflow.
installation.notes	[character(1)] Optional. Additional hints on how to run the flow.
dependencies	[character(1)] Optional. The dependencies of the flow.
bibliographical.reference	[list] An optional list containing information on bibliographical references in form of OMLBibRef.
implements	[character(1)] Ontological reference.
parameters	[list] The parameters of the flow. A list containing <a href="#">OMLFlowParameters</a> .
components	[list] A list containing <a href="#">OMLFlows</a> . Typically components of a workflow or subfunctions of an algorithm (e.g. kernels). Components can have their own parameters.
qualities	[list] Qualities of the algorithm. Each member of the list is an <a href="#">OMLFlowQuality</a> .
tags	[character] Tags describing the algorithm.

source.url	[character(1)] URL from which the source code can be downloaded. Added by the server. Ignored when uploaded manually.
binary.url	[character(1)] URL from which the binary can be downloaded. Added by the server. Ignored when uploaded manually.
source.format	[character(1)] Format of the source file.
binary.format	[character(1)] Format of the binary file.
source.md5	[character(1)] MD5 checksum to check if the source code was uploaded correctly.
binary.md5	[character(1)] MD5 checksum to check if the binary code was uploaded correctly.
source.path	[character(1)] The path to the cached source file, once <a href="#">getOMLFlow</a> was run.
binary.path	[character(1)] The path to the cached binary file, once <a href="#">getOMLFlow</a> was run.
object	[any] (optional) Any R object referring to the flow.

---

makeOMLRun

*Construct OMLRun.*

---

**Description**

More details about the elements of a OMLRun can be found in the [documentation](#).

**Usage**

```
makeOMLRun(
  run.id = NA_integer_,
  uploader = NA_integer_,
  uploader.name = NA_character_,
  task.id,
  task.type = NA_character_,
  task.evaluation.measure = NA_character_,
  flow.id = NA_integer_,
  flow.name = NA_character_,
  setup.id = NA_integer_,
```

```

    setup.string = NA_character_,
    error.message = NA_character_,
    parameter.setting = list(),
    tags = NA_character_,
    predictions = NULL,
    input.data = makeOMLIData(),
    output.data = makeOMLIData()
)

```

### Arguments

run.id	[numeric(1)] ID of the run. Added by server. Ignored when uploading a run.
uploader	[numeric(1)] ID of the user that uploaded the run. Added by server. Ignored when uploading a run.
uploader.name	[character(1)] Name of the user that uploaded the run. Ignored when uploading a run.
task.id	[numeric(1)] ID of the task that is solved in this run. This ID is given in the task description.
task.type	[character(1)] Task type of the run. See <a href="#">listOMLTaskTypes</a> for all possible types.
task.evaluation.measure	[character(1)] Evaluation measure used in the run.
flow.id	[character(1)] ID of the flow used to solve the task. Returned by the API when you upload the flow, or given in the flow description when you download an existing flow.
flow.name	[character(1)] Name of the flow.
setup.id	[numeric(1)] Unique ID of the used setup. Ignored when uploading a run (i.e., it will be searched based on the parameter settings).
setup.string	[character(1)] The CLI string that can invoke the learner with the correct parameter settings. This argument is optional.
error.message	[character(1)] Whenever an error occurs during the run, this can be reported here.
parameter.setting	[list] A list of OMLRunParameters containing information on the parameter settings.
tags	[character] Optional tags describing the run.
predictions	[data.frame] The predictions of the run.

input.data	[OMLIData] All data that served as input for the run. Added by server. Ignored when uploading.
output.data	[OMLIData] All data that was the output of this run, i.e., predictions, evaluation scores. Most of this will be added by the server, but users can also provide evaluation scores for their own evaluation measures.

**See Also**

---

makeOMLRunParList	<i>Construct OMLRunParList.</i>
-------------------	---------------------------------

---

**Description**

Generate a list of OpenML run parameter settings for a given mlr learner.

**Usage**

```
makeOMLRunParList(mlr.lrn, component = NA_character_)
```

**Arguments**

mlr.lrn	[Learner] The mlr learner.
component	[character] If the learner is a (sub-)component of a flow, this component's name.

**Value**

A OMLRunParList which is a list of OMLRunParameters.

---

makeOMLSeedParList	<i>Construct OMLSeedParList</i>
--------------------	---------------------------------

---

**Description**

Generate a list of OpenML seed parameter settings for a given seed.

**Usage**

```
makeOMLSeedParList(seed, prefix = "openml")
```

**Arguments**

seed	[numeric(1)] The seed.
prefix	[character] prefix for seed parameter names.

**Value**

A OMLSeedParList which is a list of [OMLRunParameters](#) that provide only information about the seed.

---

makeOMLStudy	<i>OMLStudy</i> .
--------------	-------------------

---

**Description**

If you create a study through the website <https://www.openml.org/new/study>, you can also specify an alias which can be used to access the study. To see a full list of all elements, please see the [documentation](#).

**Usage**

```
makeOMLStudy(
  alias,
  name,
  description,
  data.id = NULL,
  task.id = NULL,
  flow.id = NULL,
  run.id = NULL
)
```

**Arguments**

alias	[character] The alias of the study.
name	[character] The name of the study.
description	[character] The description of the study.
data.id	[integer] A vector of IDs of the data sets to be included in the study.
task.id	[integer] A vector of IDs of the tasks to be included in the study.

flow.id	[integer] A vector of IDs of the flows to be included in the study.
run.id	[integer] A vector of IDs of the runs to be included in the study.

**Value**

[OMLStudy].

**See Also**

Other uploading functions: [uploadOMLDataSet\(\)](#), [uploadOMLFlow\(\)](#), [uploadOMLRun\(\)](#), [uploadOMLStudy\(\)](#)

---

makeOMLTask	<i>Construct OMLTask.</i>
-------------	---------------------------

---

**Description**

More details about the elements of a OMLTask can be found in the [documentation](#).

**Usage**

```
makeOMLTask(
  task.id,
  task.type,
  input,
  parameters = list(),
  output,
  tags = NA_character_
)
```

**Arguments**

task.id	[integer(1)] The ID of this task. Generated by the API.
task.type	[character(1)] The task type of this task. Task types can be browsed and created on the OpenML website. See also <a href="#">listOMLTaskTypes</a> for a list of all available tasks.
input	[list] The inputs given for this task (i.e. data.set, estimation.procedure, evaluation.measures, cost.matrix).
parameters	[list] Parameter settings for this task (depends on the task type).
output	[list] Outputs expected after running this task.
tags	[character] Optional tags describing the (data of the) task.

**See Also**

Other task-related functions: [convertOMLTaskToMlr\(\)](#), [deleteOMLObject\(\)](#), [getOMLTask\(\)](#), [listOMLTaskTypes\(\)](#), [listOMLTasks\(\)](#), [tagOMLObject\(\)](#)

---

OMLDataSet

*OMLDataSet.*

---

**Description**

An `OMLDataSet` consists of an `OMLDataSetDescription`, a `data.frame` containing the data set, the old and new column names and, finally, the target features.

The `OMLDataSetDescription` provides information on the data set, like the ID, name, version, etc. To see a full list of all elements, please see the [documentation](#).

The slot `colnames.old` contains the original names, i.e., the column names that were uploaded to the server, while `colnames.new` contains the names that you will see when working with the data in R. Most of the time, old and new column names are identical. Only if the original names are not valid, the new ones will differ.

The slot `target.features` contains the column name(s) from the `data.frame` of the `OMLDataSet` that refer to the target feature(s).

**Usage**

```
makeOMLDataSet(
  desc,
  data,
  colnames.old = colnames(data),
  colnames.new = colnames(data),
  target.features = NULL
)
```

**Arguments**

<code>desc</code>	[ <code>OMLDataSetDescription</code> ] Data set description.
<code>data</code>	[ <code>data.frame</code> ] The data set.
<code>colnames.old</code>	[character] Names of the features that were uploaded to the server.
<code>colnames.new</code>	[character] Names of the features that are displayed.
<code>target.features</code>	[character] Name(s) of the target feature(s). If set, this will replace the default target in <code>desc</code> .

**Value**

[OMLDataSet]

**See Also**

Other data set-related functions: [OMLDataSetDescription](#), [convertMlrTaskToOMLDataSet\(\)](#), [convertOMLDataSetToMlr\(\)](#), [deleteOMLObject\(\)](#), [getOMLDataSet\(\)](#), [listOMLDataSets\(\)](#), [tagOMLObject\(\)](#), [uploadOMLDataSet\(\)](#)

**Examples**

```
data("airquality")
dsc = "Daily air quality measurements in New York, May to September 1973.
This data is taken from R."
cit = "Chambers, J. M., Cleveland, W. S., Kleiner, B. and Tukey, P. A. (1983) Graphical
Methods for Data Analysis. Belmont, CA: Wadsworth."
desc_airquality = makeOMLDataSetDescription(name = "airquality",
  description = dsc,
  creator = "New York State Department of Conservation (ozone data) and the National
  Weather Service (meteorological data)",
  collection.date = "May 1, 1973 to September 30, 1973",
  language = "English",
  licence = "GPL-2",
  url = "https://stat.ethz.ch/R-manual/R-devel/library/datasets/html/00Index.html",
  default.target.attribute = "Ozone",
  citation = cit,
  tags = "R")

airquality_oml = makeOMLDataSet(desc = desc_airquality,
  data = airquality,
  colnames.old = colnames(airquality),
  colnames.new = colnames(airquality),
  target.features = "Ozone")
```

---

OMLDataSetDescription *Construct OMLDataSetDescription.*

---

**Description**

Creates a description for an OMLDataSet. To see a full list of all elements, please see the [documentation](#).

**Usage**

```
makeOMLDataSetDescription(
  id = 0L,
  name,
  version = "0",
  description,
```

```

format = "ARFF",
creator = NA_character_,
contributor = NA_character_,
collection.date = NA_character_,
upload.date = as.POSIXct(Sys.time()),
language = NA_character_,
licence = NA_character_,
url = NA_character_,
default.target.attribute = NA_character_,
row.id.attribute = NA_character_,
ignore.attribute = NA_character_,
version.label = NA_character_,
citation = NA_character_,
visibility = NA_character_,
original.data.url = NA_character_,
paper.url = NA_character_,
update.comment = NA_character_,
md5.checksum = NA_character_,
status = NA_character_,
tags = NA_character_
)

```

### Arguments

id	[integer(1)] Data set ID, autogenerated by the server. Ignored when set manually.
name	[character(1)] The name of the data set.
version	[character(1)] Version of the data set, autogenerated by the server. Ignored when set manually.
description	[character(1)] Description of the data set, given by the uploader.
format	[character(1)] Format of the data set. At the moment this is always "ARFF".
creator	[character] The person(s), that created this data set. Optional.
contributor	[character] People, that contibuted to this version of the data set (e.g., by reformatting). Optional.
collection.date	[character(1)] The date the data was originally collected. Given by the uploader. Optional.
upload.date	[POSIXt] The date the data was uploaded. Added by the server. Ignored when set manually.

language	[character(1)] Language in which the data is represented. Starts with 1 upper case letter, rest lower case, e.g. 'English'
licence	[character(1)] Licence of the data. NA means: Public Domain or "don't know/care".
url	[character(1)] Valid URL that points to the data file.
default.target.attribute	[character] The default target attribute, if it exists. Of course, tasks can be defined that use another attribute as target.
row.id.attribute	[character(1)] The attribute that represents the row-id column, if present in the data set. Else NA.
ignore.attribute	[character] Attributes that should be excluded in modelling, such as identifiers and indexes. Optional.
version.label	[character(1)] Version label provided by user, something relevant to the user. Can also be a date, hash, or some other type of id.
citation	[character(1)] Reference(s) that should be cited when building on this data.
visibility	[character(1)] Who can see the data set. Typical values: 'Everyone', 'All my friends', 'Only me'. Can also be any of the user's circles.
original.data.url	[character(1)] For derived data, the url to the original data set. This can be an OpenML data set, e.g. 'http://openml.org/d/1'.
paper.url	[character(1)] Link to a paper describing the data set.
update.comment	[character(1)] When the data set is updated, add an explanation here.
md5.checksum	[character(1)] MD5 checksum to check if the data set is downloaded without corruption. Can be ignored by user.
status	[character(1)] The status of the data set, autogenerated by the server. Ignored when set manually.
tags	[character] Optional tags for the data set.

## See Also

## Examples

```
data("airquality")
dsc = "Daily air quality measurements in New York, May to September 1973.
This data is taken from R."
cit = "Chambers, J. M., Cleveland, W. S., Kleiner, B. and Tukey, P. A. (1983) Graphical
Methods for Data Analysis. Belmont, CA: Wadsworth."
desc_airquality = makeOMLDataSetDescription(name = "airquality",
  description = dsc,
  creator = "New York State Department of Conservation (ozone data) and the National
  Weather Service (meteorological data)",
  collection.date = "May 1, 1973 to September 30, 1973",
  language = "English",
  licence = "GPL-2",
  url = "https://stat.ethz.ch/R-manual/R-devel/library/datasets/html/00Index.html",
  default.target.attribute = "Ozone",
  citation = cit,
  tags = "R")

airquality_oml = makeOMLDataSet(desc = desc_airquality,
  data = airquality,
  colnames.old = colnames(airquality),
  colnames.new = colnames(airquality),
  target.features = "Ozone")
```

---

populateOMLCache

*Download a bunch of OpenML objects to cache.*

---

## Description

Given a set of OML object ids, the function populates the cache directory by downloading the corresponding objects. This can avoid network access in later experiments, as you can retrieve all objects from the cache on disk. This is of particular interest in highly parallel computations on a cluster with a shared file system.

## Usage

```
populateOMLCache(
  data.ids = integer(0L),
  task.ids = integer(0L),
  flow.ids = integer(0L),
  run.ids = integer(0L),
  verbosity = NULL,
  overwrite = FALSE
)
```

**Arguments**

data.ids	[integer] Dataset IDs. Default is none.
task.ids	[integer] Task IDs. Default is none.
flow.ids	[integer] Flow IDs. Default is none.
run.ids	[integer] Run IDs. Default is none.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .
overwrite	[integer(1)] Should files that are already in cache be overwritten?

**Value**

[invisible(NULL)]

---

runTaskFlow	<i>Reproduce the Run</i>
-------------	--------------------------

---

**Description**

Uses the ID of the run and tries to reproduce its results by downloading the flow and applying it to the respective task.

**Usage**

```
runTaskFlow(
  task,
  flow,
  par.list,
  seed = 1,
  predict.type = NULL,
  verbosity = NULL,
  models = TRUE
)
```

**Arguments**

task	[OMLTask] An OpenML task.
flow	[OMLFlow] Flow that is applied to the Task.
par.list	[list OMLRunParList] Can be either a named list containing the hyperparameter values or a <a href="#">OMLRunParList</a> .
seed	[numeric(1) OMLSeedParList ] Set a seed to make the run reproducible. Default is 1 and sets the seed using <code>set.seed(1)</code> .
predict.type	[character(1)] Optional. See <a href="#">setPredictType</a> . Default is "response".
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .
models	[logical(1)] This argument is passed to <a href="#">benchmark</a> . Should all fitted models be stored in the <a href="#">ResampleResult</a> ? Default is TRUE.

**Value**

[OMLMlrRun], an [OMLRun](#).

---

runTaskMlr	<i>Run mlr learner on OpenML task.</i>
------------	--

---

**Description**

Run task with a specified learner from **mlr** and produce predictions. By default, the evaluation measure contained in the task is used.

**Usage**

```
runTaskMlr(
  task,
  learner,
  measures = NULL,
  verbosity = NULL,
  seed = 1,
  scimark.vector = NULL,
  models = TRUE,
  ...
)
```

**Arguments**

task	[ <a href="#">OMLTask</a> ] An OpenML task.
learner	[ <a href="#">Learner</a> ] Learner from package mlr to run the task.
measures	[ <a href="#">Measure</a> ] Additional measures that should be computed.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .
seed	[numeric(1)  <a href="#">OMLSeedParList</a> ] Set a seed to make the run reproducible. Default is 1 and sets the seed using <code>set.seed(1)</code> .
scimark.vector	[numeric(6)] Optional vector of performance measurements computed by the scientific SciMark benchmark. May be computed using the <b>rscimark</b> R package. Default is NULL, which means no performance measurements.
models	[logical(1)] This argument is passed to <a href="#">benchmark</a> . Should all fitted models be stored in the <a href="#">ResampleResult</a> ? Default is TRUE.
...	[any] Further arguments that are passed to <a href="#">convertOMLTaskToMlr</a> .

**Value**

[list] Named list with the following components:

**run** The [OMLRun](#) object.

**bmr** Benchmark result returned by [benchmark](#).

**flow** The generated [OMLFlow](#) object.

**See Also**

[getOMLTask](#), [makeLearner](#)

**Examples**

```
# \dontrun{
#   library(mlr)
#   ## run a single flow (learner) on a single task
#   task = getOMLTask(57)
#   lrn = makeLearner("classif.rpart")
#   res = runTaskMlr(task, lrn)
#   ## the result "res" is a list, storing information on the actual "run", the
```

```
# ## corresponding benchmark result "bmr" and the applied "flow"
# }
```

---

saveOMLConfig	<i>Saves a list of OpenML configuration settings to file.</i>
---------------	---

---

### Description

The new configuration is automatically assigned via [setOMLConfig](#) if all checks pass. If you don't set a certain option, package defaults will be inserted into the file.

### Usage

```
saveOMLConfig(
  server = NULL,
  verbosity = NULL,
  apikey = NULL,
  cachedir = NULL,
  arff.reader = NULL,
  confirm.upload = NULL,
  overwrite = FALSE
)
```

### Arguments

server	[character(1)] URL of the XML API endpoint.
verbosity	[integer(1)] Verbosity level. Possible values are 0 (normal output), 1 (info output), 2 (debug output).
apikey	[character(1)] Your OpenML API key. Log in to OpenML, move to your profile to get it.
cachedir	[character(1)] Path to the cache directory.
arff.reader	[character(1)] Name of the package which should be used to parse arff files. Possible are "RWeka", which is the default and "farff".
confirm.upload	[logical(1)] Should the user be asked for confirmation before upload of OML objects?
overwrite	[logical(1)] Should an existing file be overwritten? Default is FALSE.

### See Also

Other config: [configuration](#), [getOMLConfig\(\)](#), [loadOMLConfig\(\)](#), [setOMLConfig\(\)](#)

---

setOMLConfig	<i>Setter for configuration settings.</i>
--------------	---

---

**Description**

Set and overwrite configuration settings.

**Usage**

```
setOMLConfig(  
  server = NULL,  
  verbosity = NULL,  
  apikey = NULL,  
  cachedir = NULL,  
  arff.reader = NULL,  
  confirm.upload = NULL  
)
```

**Arguments**

server	[character(1)] URL of the XML API endpoint.
verbosity	[integer(1)] Verbosity level. Possible values are 0 (normal output), 1 (info output), 2 (debug output).
apikey	[character(1)] Your OpenML API key. Log in to OpenML, move to your profile to get it.
cachedir	[character(1)] Path to the cache directory.
arff.reader	[character(1)] Name of the package which should be used to parse arff files. Possible are “RWeka”, which is the default and “farff”.
confirm.upload	[logical(1)] Should the user be asked for confirmation before upload of OML objects?

**Value**

Invisibly returns a list of configuration settings.

**See Also**

Other config: [configuration](#), [getOMLConfig\(\)](#), [loadOMLConfig\(\)](#), [saveOMLConfig\(\)](#)

---

tagOMLObject	<i>Tagging of OpenML objects</i>
--------------	----------------------------------

---

### Description

Add or remove a specific tag to a OpenML data, task, flow or run.

### Usage

```
tagOMLObject(
  ids,
  object = c("data", "task", "flow", "run"),
  tags,
  verbosity = NULL
)

untagOMLObject(
  ids,
  object = c("data", "task", "flow", "run"),
  tags,
  verbosity = NULL
)
```

### Arguments

ids	[integer] The IDs of the respective objects.
object	[character(1)] A character that specifies the object you want to delete from the server. Can be either "data", "task", "flow" or "run".
tags	[character] The tags that should be added/removed.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

uploadOMLDataSet      *Upload a data set to the OpenML server.*

---

## Description

Share a data set by uploading it to the OpenML server.

## Usage

```
uploadOMLDataSet(
  x,
  tags = NULL,
  description = NULL,
  confirm.upload = NULL,
  verbosity = NULL
)
```

## Arguments

x	[Task OMLDataSet] Contains the data set that should be uploaded.
tags	[character] The tags that should be added after uploading.
description	[character(1) OMLDataSetDescription] Either an <a href="#">OMLDataSetDescription</a> or a character(1) that describes the data. For the latter, all other relevant information is autogenerated from the <a href="#">Task</a> .
confirm.upload	[logical(1)] Should the user be asked to confirm the upload? Default is the setting from your config.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .

## Value

[invisible(numeric(1))]. The ID of the data (data.id).

**Note**

This function will reset the cache of [listOMLDataSets](#) on success.

**See Also**

Other uploading functions: [makeOMLStudy\(\)](#), [uploadOMLFlow\(\)](#), [uploadOMLRun\(\)](#), [uploadOMLStudy\(\)](#)

Other data set-related functions: [OMLDataSetDescription](#), [OMLDataSet](#), [convertMlrTaskToOMLDataSet\(\)](#), [convertOMLDataSetToMlr\(\)](#), [deleteOMLObject\(\)](#), [getOMLDataSet\(\)](#), [listOMLDataSets\(\)](#), [tagOMLObject\(\)](#)

---

 uploadOMLFlow

*Upload an OpenML.*

---

**Description**

Share a flow by uploading it to the OpenML server.

**Usage**

```
uploadOMLFlow(
  x,
  tags = NULL,
  verbosity = NULL,
  confirm.upload = NULL,
  sourcefile = NULL,
  binaryfile = NULL
)
```

**Arguments**

x	[ <a href="#">OMLFlowLearner</a> ] The flow that should be uploaded.
tags	[character] The tags that should be added after uploading.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .
confirm.upload	[logical(1)] Should the user be asked to confirm the upload? Default is the setting from your config.
sourcefile	[character(1)] The file path to the flow (not needed for <a href="#">Learner</a> ).
binaryfile	[character(1)] The file path to the flow (not needed for <a href="#">Learner</a> ).

**Value**

[invisible(numeric)]. The ID of the flow (flow.id).

**Note**

This function will reset the cache of [listOMLFlows](#) on success.

**See Also**

Other uploading functions: [makeOMLStudy\(\)](#), [uploadOMLDataSet\(\)](#), [uploadOMLRun\(\)](#), [uploadOMLStudy\(\)](#)

---

uploadOMLRun	<i>Upload an OpenML run.</i>
--------------	------------------------------

---

**Description**

Share a run of a flow on a given OpenML task by uploading it to the OpenML server.

**Usage**

```
uploadOMLRun(
  run,
  upload.bmr = FALSE,
  tags = NULL,
  confirm.upload = NULL,
  verbosity = NULL,
  ...
)
```

**Arguments**

run	[OMLRun OMLMlrRun] The run that should be uploaded. Either a <a href="#">OMLRun</a> or a run created with <a href="#">OMLMlrRun</a> .
upload.bmr	[logical(1)] Should the Benchmark result created by <a href="#">benchmark</a> function be uploaded? If set to TRUE and the flow is created via <a href="#">makeTuneWrapper</a> , an arff file that contains the hyperparameter optimization trace is also uploaded.
tags	[character] The tags that should be added after uploading.
confirm.upload	[logical(1)] Should the user be asked to confirm the upload? Default is the setting from your config.

verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <code>setOMLConfig</code> .
...	Not used.

**Value**

[invisible(numeric(1))]. The run ID.

**Note**

This function will reset the cache of `listOMLRuns` and `listOMLRunEvaluations` on success.

By default you will be asked to confirm the upload. You can deactivate the need for confirmation by setting “confirm.upload = TRUE” via `setOMLConfig` or set the corresponding argument each time you call the function.

**See Also**

Other uploading functions: `makeOMLStudy()`, `uploadOMLDataSet()`, `uploadOMLFlow()`, `uploadOMLStudy()`

Other run-related functions: `convertOMLMLrRunToBMR()`, `convertOMLRunToBMR()`, `deleteOMLObject()`, `getOMLRun()`, `listOMLRuns()`, `makeOMLRunParameter()`, `makeOMLRun()`, `tagOMLObject()`

---

uploadOMLStudy	<i>Upload OpenML Study information.</i>
----------------	---

---

**Description**

A OpenML study is a collection of OpenML objects. If you create a study through the website <https://www.openml.org/new/study>, you can also specify an alias which can be used to access the study.

**Usage**

```
uploadOMLStudy(x, confirm.upload = NULL, verbosity = NULL)
```

**Arguments**

x	[[OMLStudy] Contains the study information that should be uploaded.
confirm.upload	[logical(1)] Should the user be asked to confirm the upload? Default is the setting from your config.

**verbosity**      [integer(1)]  
 Print verbose output on console? Possible values are:  
 0: normal output,  
 1: info output,  
 2: debug output.  
 Default is set via [setOMLConfig](#).

### Value

[OMLStudy].

### See Also

Other uploading functions: [makeOMLStudy\(\)](#), [uploadOMLDataSet\(\)](#), [uploadOMLFlow\(\)](#), [uploadOMLRun\(\)](#)

---

uploadOMLTask	<i>Upload a task to the OpenML server.</i>
---------------	--

---

### Description

Share a task by uploading it to the OpenML server.

### Usage

```

uploadOMLTask(
  task.type,
  data.id,
  target.feature,
  estimation.procedure,
  evaluation.measure = NULL,
  tags = NULL,
  description = NULL,
  confirm.upload = NULL,
  verbosity = NULL
)
  
```

### Arguments

**task.type**      [character(1)]  
 The type of the task to upload. See [listOMLTaskTypes\(\)](#) to list all valid task types.

**data.id**        [integer(1)]  
 ID of the data set.

**target.feature** [character(1)]  
 The target feature of the dataset.

estimation.procedure	[character(1)] The estimation procedure for the evaluation. See <code>listOMLEstimationProcedures()</code> to list all procedures.
evaluation.measure	[character(1)] The evaluation measure for the evaluation. See <code>listOMLEvaluationMeasures()</code> to list all possible measures.
tags	[character] The tags that should be added after uploading.
description	[character(1)  <a href="#">OMLDataSetDescription</a> ] Either an <a href="#">OMLDataSetDescription</a> or a <code>character(1)</code> that describes the data. For the latter, all other relevant information is autogenerated from the <a href="#">Task</a> .
confirm.upload	[logical(1)] Should the user be asked to confirm the upload? Default is the setting from your config.
verbosity	[integer(1)] Print verbose output on console? Possible values are: 0: normal output, 1: info output, 2: debug output. Default is set via <a href="#">setOMLConfig</a> .
